REVIEW SUMMARY

Aave V3.8

Tomer Security First reviewed Aave V3.8, a defence-in-depth release of the Aave V3 protocol. This report records the scope of that review, Tomer's assessment of the implemented change and his recommendation regarding its inclusion in the update.

The reviewed change is limited to the guard addition, so no Pool action can be entered while another is in flight. The assessment focuses on the change as implemented in the revision identified below and on preserving the protocol's intended functionality.

Assessment and recommendation

Tomer recommends the addition of the reentrancy guard and has reviewed the implementation of the recommended change in the referenced commit. In his assessment, the addition is appropriate for Aave V3.8, and he supports its inclusion in the update.

This recommendation concerns the implemented change reviewed by Tomer. The commit reference provides a specific basis for the assessment and identifies the code revision to which this report applies.

Functional continuity

Preserving the protocol's existing functionality is an important part of the assessment. In Tomer's review, the guard addition does not change the protocol's intended functionality: the code continues to operate in the same way for its intended use, and the behavior of normal protocol operations is maintained.

Tomer therefore supports the reviewed change as an addition to the existing implementation, with continuity of the protocol's intended behavior.

REVIEW LIMITATIONS

Disclaimer

This report records Tomer Security First’s review of the reentrancy guard addition in Aave V3.8 for Aave Labs. The assessment applies to the change at the repository and commit identified in this document.

The review is limited to the guard addition and its integration with the existing implementation. The conclusion on functional continuity concerns the protocol’s intended use and normal operation. This report does not constitute a comprehensive security assessment of every component of Aave V3.8.

A security review cannot identify every possible vulnerability or guarantee that the reviewed system is free of defects. Changes made after the review, deployment configuration, dependencies and operational decisions may introduce risks beyond the scope of this report.

This report is a technical assessment, not a guarantee of security or a recommendation to use the protocol. Tomer’s recommendation concerns the reviewed code change. Tomer Security First makes no representations or warranties regarding the fitness of the reviewed code for any particular purpose and shall not be held liable for losses arising from deployment or use of the system.
